* To prepare this chart, the OCSME conducted an analysis of the decedent's history, death scene investigation, autopsy report and toxicology results on all cases categorized as drug related deaths. Any cases positive for morphine that were found to be likely due to heroin (e.g., illicit drug paraphernalia at the scene, presence of a small amount of codeine in the blood, etc.) were classified as heroin related deaths. All cases positive for multiple drugs were included in each relevant column.
